NanoSelect LF 100
Selective Hydrogenation Catalyst

Superior performance without lead and with less precious metal content

NanoSelect™ catalysts are characterized by unimodal metal particles on the nanometer scale. Nanotechnology is science and controlled engineering on the scale of nanometers (billionths of a meter). Reducing the size of metal particles to nanometers:

- Greatly increases the metal surface area available per gram.
- Boosts the catalytic activity.
- Demonstrates different catalytic behavior.

BASF Catalysts used these basic principles to develop the innovative, patented NanoSelect technology. This technology utilizes a BASF reagent to combine reducing and stabilizing functions that produce highly unimodal, nanosized metal colloids. These colloids can be deposited onto different support materials giving heterogeneous catalysts with unique and surprising catalytic behaviors.

NanoSelect LF 100 catalyst contains only 0.6 wt% of palladium and is lead free (LF) on a support of carbon powder. For this catalyst NanoSelect technology provides metal crystallite sizes of around 7 nm. Comparison of the performance of NanoSelect LF 100 with Lindlar catalyst in selective hydrogenation reactions reveals similar activity and selectivity.

Typical Properties

Availability

Research quantities are available by order through Strem Chemicals, Inc. on the web at [www.strem.com/basf](http://www.strem.com/basf). Commercial quantities are available directly from BASF by calling one of the following regional offices:

+1-973-245-7447 (Americas)
+39 064-199-2605 (EMEA)
+91 22-616-4159 (Asia Pacific)
About BASF

BASF’s Catalysts division is the world’s leading supplier of environmental and process catalysts. The group offers exceptional expertise in the development of technologies that protect the air we breathe, produce the fuels that power our world and ensure efficient production of a wide variety of chemicals, plastics and other products, including advanced battery materials. By leveraging our industry-leading R&D platforms, passion for innovation and deep knowledge of precious and base metals, BASF’s Catalysts division develops unique, proprietary solutions that drive customer success.
