Application Propylene from PRU

Technical information

Propylene Recovery Units (PRU) are used widely to recover propylene from gases generated in catalytic cracking units (FCC and similar) as operated in refineries.

BASF offers for the treatment of these streams:

- **Selexsorb®** CD/CDL and **COS/COSi** for the regenerative removal of water, oxygenates, H₂S and COS
- **PuriStar® R3-12** and the improved **R3-22** for the sacrificial removal of AsH₃, PH₃ and COS
- **PuriStar® R3-17RED** for the regenerative removal of CO
- **H0-14** (MAPD trace removal) and **3A mol sieves** (drying) are also available

Treatment of other streams from refineries like ethylene containing streams (ERU) are also offered.

All materials indicated are in use since many years and provide for long lifetime and high capacity.

Continuous R&D efforts allow for continuous adaptation to new market requirements.

3 reasons to buy our product / benefits

- **Market leading Adsorbent solutions**
- Optimal and reliable removal efficiency
- Continuous adaptation to new market requirements

About us
BASF’s Catalysts division is the world’s leading supplier of environmental and process catalysts. The division offers exceptional expertise in the development of technologies that protect the air we breathe, produce the fuels that power our world and ensure efficient production of a wide variety of chemicals, plastics and other products, including advanced battery materials. By leveraging our industry-leading R&D platforms, passion for innovation and deep knowledge of precious and base metals, BASF’s Catalysts division develops unique, proprietary solutions that drive customer success.
